Abstract of JP7190024

PURPOSE: To provide a mounting structure for mounting an unspecified member on a pipe end part. **CONSTITUTION:** The outside end surface 2c of a first cylindrical member capable of being inserted into a pipe 1 and having a diameter slightly smaller than the pipe bore diameter is constituted by an inclined surface, and a second cylindrical member 3A capable of being inserted into the pipe 1 and having a diameter slightly smaller than the pipe 1 bore diameter is integrally formed on a weight 3 to be mounted on the pipe end part. The end surface 3C on the insert side to the pipe 1 of the second cylindrical member 3A is constituted by an reversely inclined surface to the end surface 2c of the first cylindrical member 2, and the first cylindrical member 2 and the second cylindrical member 3A are screwed together by a mounting bolt 4 in such a manner as to be mutually approached.
